What to do now

- [ ] **Change passwords stored in plain text**
  22 breach(es) stored passwords without protection. Change any password you used on those services.

- [ ] **Change the password on every listed service**
  Do it from the service itself, not from a link in an email.

- [ ] **Sign out other sessions**
  Leaked tokens can keep a session open after a password change.

- [ ] **Be careful with calls and texts**
  Scammers use leaked phone numbers. Never share a verification code with anyone.

- [ ] **Watch for identity misuse**
  Review your bank and credit statements, and consider a fraud alert or credit freeze where it is available.

- [ ] **Turn on two-factor authentication**
  Protect your email first, because it can reset almost every other account.

- [ ] **Stop reusing passwords**
  A leak on one site should never unlock another.
